EXECUTIVE PROFILE

A cross-disciplinary engineer and architect with over two decades of applied experience spanning enterprise security, zero-trust infrastructure, and bare-metal hardware diagnostics. Specializing in moving beyond traditional systems administration to build highly decoupled, immutable environments and enforce strict information security policies.

Demonstrated expertise in engineering Layer 2 network topologies (macvlan/ipvlan), architecting Zero-Trust integrations for localized Large Language Models (LLMs) via Model Context Protocol (MCP) servers, and modernizing enterprise disaster recovery frameworks to build robust, automated, and secure architectures. A versatile technologist capable of rapidly assimilating emerging technologies to solve complex enterprise challenges.

CORE COMPETENCIES

Architecture & Security Enterprise Architecture, Zero Trust Architecture (ZTA), Cybersecurity, Disaster Recovery (DR), Business Continuity Planning (BCP), Information Security Management, Security Auditing, IT Policy Development, Systems Architecture	Cloud, Virtualization & Network Cloud Computing, Containerization (Docker/Kubernetes), VMware Infrastructure, Hyper-V, Proxmox, Storage Area Networks (SAN / EMC / Synology / QNAP), Layer 2 Networking (macvlan/ipvlan), OpenWrt Edge Routing, SonicWall Firewalls, VoIP
Automation & AI Integration Local LLM Integration, Model Context Protocol (MCP) Servers, CI/CD Pipelines, Infrastructure as Code, PowerShell Scripting, SCCM, Bash/Python Automation	Hardware & Systems Administration Windows Server, Active Directory, Office 365, Linux (Debian/Ubuntu/Fedora), Nessus Vulnerability Management, Bare-Metal Diagnostics, Component-Level Repair

PROFESSIONAL EXPERIENCE

Infrastructure Security Analyst (Independent Contractor) — **RPDevs Consulting & Architecture** Aug 2021 – Present

- Delivered end-to-end security consulting and infrastructure architecture across a diverse client portfolio, resolving complex technical challenges for organizations ranging from SMBs to large enterprises.
- Rapidly assimilated emerging technologies and domain-specific requirements to provide bespoke solutions, drawing upon decades of broad-spectrum IT, networking, and software engineering experience.
- Architected decoupled container environments across distributed physical nodes (OpenWrt edge routers, NVMe storage arrays, and GPU-accelerated compute hosts) for client-facing R&D.
- Engineered complete Layer 2 network topologies utilizing macvlan and ipvlan to eliminate NAT port collisions, enforcing strict IP Address Management (IPAM) and automated DNS delegation.
- Designed Zero-Trust integrations for Local Large Language Models (LLMs), routing external cloud AI agents through Cloudflare Workers and secure Server-Sent Events (SSE) tunnels to localized Model Context Protocol (MCP) servers.
- Implemented strict Tiered Storage Architecture, deploying high-I/O PostgreSQL databases to local SSDs while mapping volatile active-defense honeypots (Cowrie, Endlesssh) directly to tmpfs RAM disks to prevent hardware flash-exhaustion.
- Automated CI/CD pipelines using self-hosted GitHub Actions runners to compile custom OpenWrt firmware and deploy container manifests based on immutable environment states.

Skills: Enterprise Architecture, Cybersecurity, Zero Trust, AI Integration, Docker, CI/CD, Network Architecture, Cloud Computing

System Engineer (Contract via Apex Systems) — **Rockwell Automation**

Sep 2021 – May 2022

- Delivered critical remote infrastructure support for international manufacturing corporations in a high-stakes, 24/7 global operation where minutes of downtime equated to millions in financial losses.
- Managed and rapidly troubleshooted complex enterprise hardware, including dense blade enclosures, discrete servers, and heavy Storage Area Networks (EMC SAN).
- Administered Active Directory infrastructure and orchestrated virtualized environments via VMware management consoles to ensure continuous high availability.
- Executed emergency break-fix response and infrastructure maintenance with strict adherence to change management procedures and complex network/SAN switching protocols.

Skills: SAN, Server Administration, VMware Infrastructure, Active Directory, High Availability (HA), Change Management

Senior System Security Engineer — **Clunk, Hoose Co., LPA**

Oct 2020 – Jul 2021

- Directed overarching security infrastructure for distributed systems and remote branch sites.
- Architected complete onsite-to-hosted datacenter migration, including a hybrid Exchange-to-O365 deployment.
- Enforced disaster recovery continuity by deploying multi-site Veeam backup replication.
- Conducted deep-level remediation of legacy Active Directory and DNS misconfigurations to align with modern security standards; upgraded and hardened VMware virtualization clusters.

Skills: Systems Architecture, Cybersecurity, Disaster Recovery, Data Center Migration, Office 365, Veeam, VMware

Systems Administrator (Contractor) — **Q Holding, Co.**

Mar 2020 – Jul 2020

- Authored and implemented comprehensive SonicWall hardening guides to secure multinational corporate infrastructure.
- Architected disaster recovery solutions, deploying and maintaining Unitrends backups and cross-site replication.
- Maintained and hardened Synology SAN and QNAP NAS systems across multiple remote sites to ensure data integrity and availability.
- Executed critical infrastructure upgrades, configuring VMware clusters to industry standards and remediating Active Directory/DNS misconfigurations.

Skills: Firewall Administration (SonicWall), Disaster Recovery, SAN/NAS Storage, VMware, Systems Hardening

Senior Systems Administrator / Network Security Analyst — **ASM Research (VHA Contract)**

Mar 2017 – Jan 2020

- Served as Technical Team Lead for Veterans Health Administration sites across Ohio (Cleveland, Columbus, Cincinnati, Chillicothe, Dayton), mentoring local technicians and coordinating environment status with area managers.
- Managed patching, software compliance, and endpoint security for 6,000+ machines over multiple sites.
- Interpreted Nessus vulnerability scans to orchestrate patching, identify false positives, and ensure compliance with strict government baselines.
- Authored custom PowerShell and Batch scripts to manage Active Directory, SCCM, patching workflows, and software installations.

Skills: Vulnerability Management (Nessus), SCCM, Endpoint Security, PowerShell, Active Directory, Technical Leadership

Information Security Officer — **Omega Title Agency / Law Offices of John D. Clunk**

Oct 2011 – Mar 2017

- Architected and administered all production and development systems across multiple distributed organizations, taking total ownership of overarching security infrastructure and remote site connectivity.
- Primary lead for third-party information security audits, driving rapid remediation and completing client security questionnaires.
- Designed and maintained comprehensive Disaster Recovery (DR) and Business Continuity environments with near-zero data loss tolerance.
- Authored, implemented, and strictly enforced comprehensive IT security policies, operating procedures, and physical security standards.
- Managed full lifecycle project planning, technology budgeting, hardware quoting/purchasing, software licensing, and Help Desk operations.

Skills: Information Security Management, Security Auditing, BCP/DR, IT Policy Development, Project Management, VoIP

Systems Administrator — ProcessPro LLC**Oct 2011 – Aug 2015**

- Managed complex routing, networking, and critical system maintenance to ensure 100% production uptime during business hours.
- Orchestrated strict daily backup routines and critical data recovery procedures to align with Business Continuity planning.
- Conducted extensive product research, testing, quoting, and procurement for new enterprise equipment and software deployments.

*Skills: Network Infrastructure, Data Protection, Procurement, Technical Troubleshooting, Systems Administration***Electronic Technician — Cuyahoga County Engineers****Aug 2010 – Oct 2011**

- Diagnosed and repaired complex automotive electrical systems, proprietary hardware, and computer control modules (ECMs).
- Engineered and installed custom lighting, communication, and control systems for specialized county vehicles.

*Skills: Hardware Diagnostics, Electronics Repair, System Analysis, Technical Documentation, Fleet Management***IT Director — BGE Technologies****May 2008 – Mar 2010**

- Architected, planned, and implemented comprehensive network infrastructure tailored for Small and Medium Business (SMB) clients.
- Maintained, secured, and administered Microsoft IIS web servers and email systems (SmarterMail), providing 24/7 on-call management.
- Delivered component-level maintenance and repair for client laser printers and desktop hardware.

*Skills: Network Design, Server Administration (IIS), Web Design, Hardware Repair, IT Consulting***Early Career Diagnostic & Computer Technician Roles****Jan 2003 – May 2008**

- **PCS Automotive Inc** (2007–2008): Diagnostic Technician — Programmed/flashed ECMs, rewired vehicle electrical harnesses, and maintained shop diagnostic network.
- **Bellaire Puritas Development Corp** (2006–2007): Computer Technician — Repaired donated hardware for community deployment, supported internal staff LAN.
- **BGE Technologies** (2003–2006): IT Professional — Component-level CRT/TV/printer diagnostics, IIS/Exchange administration, and ISP infrastructure maintenance.

*Detailed breakdown available at: https://iamrp.dev/resume/legacy_roles***EDUCATION****ITT Technical Institute — Strongsville, Ohio****Graduated September 2009****Associate of Applied Science in Computer Networking Systems | GPA: 3.9**

2 years of core programming education (C, C++, Java, Visual Basic)
